

CASES

Must be isolated for a minimum of 10 days* after symptom onset (or specimen collection date if asymptomatic) and can be released when the following criteria are met:

- Case is afebrile (without fever-reducing medication) for at least 24 hours **and** with improvement of COVID-19 symptoms

Time-based Strategy for Release from Isolation

Date of symptom onset or specimen collection date (if asymptomatic) is counted as Day 0.

OR

- Case has 2 negative COVID-19 PCR tests in a row, with specimens collected and testing done at least 24 hours apart
A test-based strategy is no longer recommended in the majority of cases. Consult with infectious disease physician.

*A limited number of persons with severe illness or who are severely immunosuppressed may produce replication-competent virus beyond 10 days; this may warrant extending duration of isolation and precautions for **up to 20 days after symptom onset or first positive test (if no symptoms)**.
Consult with the infectious disease physician.

For hospitalized cases and discontinuing transmission-based precautions, see:
<https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-hospitalized-patients.html>

CLOSE CONTACTS¹

- Must be quarantined for 14 days after the last/most recent contact with the case when the case was infectious.
- If a close contact develops symptoms, they should follow isolation rules for cases.

Contact Scenario	Quarantine Period
<ul style="list-style-type: none"> • Has close contact with someone who has COVID-19 and will not have further close contact 	<ul style="list-style-type: none"> • 14 days from the date of last close contact
<ul style="list-style-type: none"> • Has close contact with someone who has COVID-19 and lives with the case but can avoid further close contact 	<ul style="list-style-type: none"> • 14 days from when the person with COVID-19 began home isolation away from other members of the household
<ul style="list-style-type: none"> • Is under quarantine and had additional close contact with someone else who has COVID-19 	<ul style="list-style-type: none"> • Restart quarantine from the last day close contact occurred with anyone who has COVID-19. Any time a new household member gets sick with COVID-19 and close contact occurs, quarantine will need to be restarted.
<ul style="list-style-type: none"> • Lives with someone who has COVID-19 and cannot avoid continued close contact (e.g., shared kitchen/bathroom) 	<ul style="list-style-type: none"> • Quarantine for 14 days after the person who has COVID-19 meets the <u>criteria to end home isolation</u> (see Cases information).
<ul style="list-style-type: none"> • Was previously diagnosed with COVID-19 but did not undergo SARS-CoV-2 testing and is now a close contact to a confirmed COVID-19 case 	<ul style="list-style-type: none"> • Quarantine for 14 days from the date of last close contact to the COVID-19 case. <u>Antibody testing results are not considered</u> when determining quarantine status.

¹ For COVID-19, a close contact is defined as being within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to test specimen collection) until the time the case is isolated. For additional information, see <https://www.cdc.gov/coronavirus/2019-ncov/php/contact-tracing/contact-tracing-plan/appendix.html#contact>
